

## Steelstring Ambition-I2

The Ambition – I2 is a “Twelve-String“ without compromises. Based on the Ambition-Standard model here the neck to body transition is at the twelfth fret to be able to place the bridge at a particularly favorably spot at the center of the top.

With the help of a sophisticated bracing-system the top was adapted to the requirements of the increased string-tension. The result is a full and intense but nevertheless differentiating sound.

In the head area weight was saved by the choice of a slotted Emberger-Head so that the instrument is appropriately balanced and well handled.

The low string-action provides for minimal energy expenditure when fretting the guitar and makes for an extremely easy playability of a “Twelve-String“.

### Specifications:
