

Steelstring PT59

The PT59 is the starter model for our steelstring guitars.

While developing this guitar our intention was to create an instrument that motivates through the development of its sound at an acceptable price.

Thereby we did not want the cost-savings to impede with the substantially important signs of quality of a good instrument as there are good sound, good workmanship, solid woods which all are a 'MUST' as it is with all instruments of a higher price class.
